All our outdoor options are fully motorisable. Elettrico is our house brand, a super economical option.

We also stock two heavy duty Somfy motors which allows you to add your blinds to automation systems. Alternatively you can simply connect to a remote control.

Wind and Light sensors are also available which can automatically protect your furnishings from the sun and your blinds from excessive wind, **even when you are not on site.**

Safety

Safety is important and careful planning and decisions should be made when selecting your outdoor products. Gusts of wind can cause severe harm if your blinds are not properly specified or installed. Blinds are not suitable for heavy winds and should be retracted during these conditions.
